THE SOURCE EVALUATIONS IN THIS REPORT ARE DEFINITIVE.  
THE APPRAISAL OF CONTENT IS TENTATIVE.  
(FOR KEY SEE REVERSE)

- During 1954, a machine for the recovery of powdery dust was constructed for the Polish state trading firm POLIMEX. The machine was shipped to Poland in December 1954 for installation in the former Oberschlesische Stickstoffwerke near Jaworzno. This machine is now in storage in the Rokita chemical plant at Brzeg Dolny (Dyhernfurth). The building in which it was to be installed at Jaworzno was apparently not completed on schedule, so the machine had to be sent to Rokita for storage. the machine may have to remain in Rokita for another year before it can be installed at Jaworzno.
